

# WORD TO DIGIT

## CHALLENGE DESCRIPTION:

Having a string representation of a set of numbers you need to print this numbers.

All numbers are separated by semicolon. There are up to 20 numbers in one line. The numbers are "zero" to "nine"

## INPUT SAMPLE:

Your program should accept as its first argument a path to a filename. Each line in this file is one test case. E.g.

```
zero;two;five;seven;eight;four
three;seven;eight;nine;two
```

## OUTPUT SAMPLE:

Print numbers in the following way:

```
025784
37892
```
