REMOVE CHARACTERS

CHALLENGE DESCRIPTION:

Write a program which removes specific characters from a string.

INPUT SAMPLE:

The first argument is a path to a file. The file contains the source strings and the characters that need to be scrubbed. Each source string and characters you need to scrub are delimited by comma.

For example:

```
how are you, abc
hello world, def
```

OUTPUT SAMPLE:

Print to stdout the scrubbed strings, one per line. Ensure that there are no trailing empty spaces on each line you print.

For example:

```
how re you
hllo worl
```
